Knowledge Infrastructures

Knowledge Infrastructures are an Enabler for Knowledge Management [Siv01].

→ 3 Main Dimensions:

Business Processes and Implications for Organizations

Example: A Logistics Center

B-KIDE

„Introduce a set of instruments that allows for the development of business process supportive, technological knowledge infrastructures for knowledge intensive organizations.“

In detail,

- **Improve environments** of knowledge workers
- **Enable role-oriented access** to knowledge
- **Enable autonomous routing** of knowledge
- **Standardize the execution** of knowledge work
- **Increase transparency** of knowledge

Definition

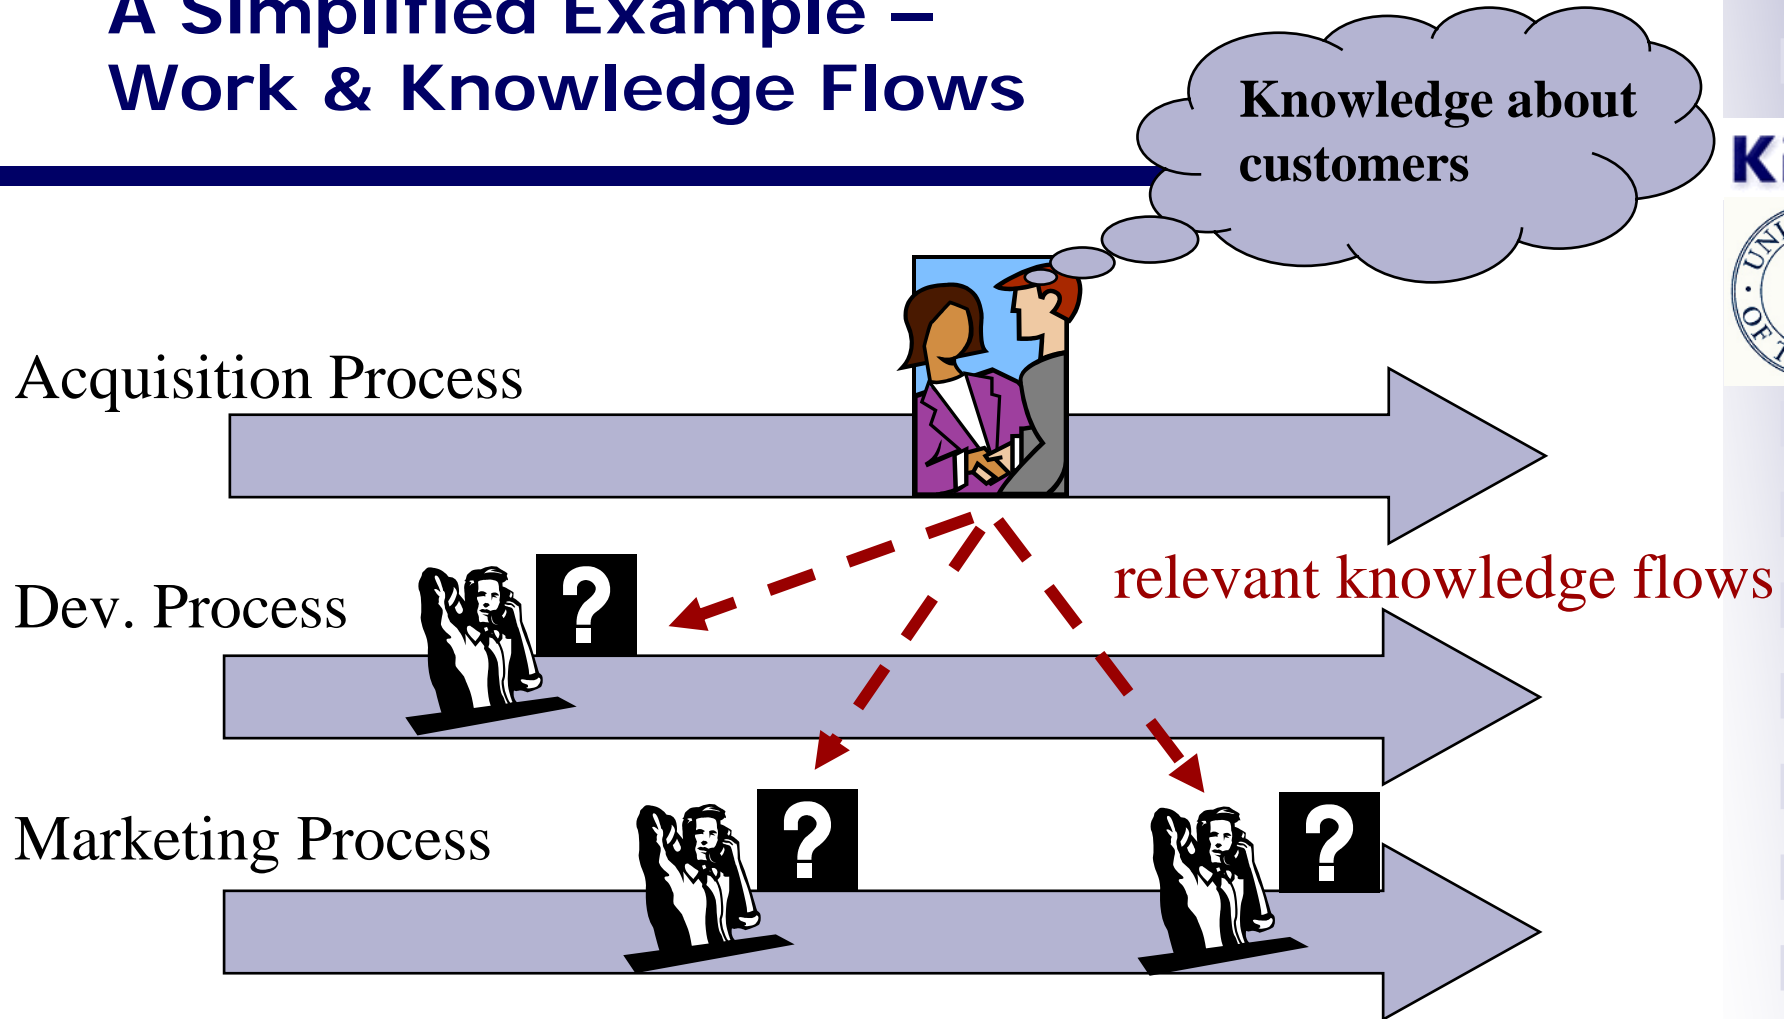

- (Organizational) Knowledge = Information that is relevant for undertaking (business) actions

A Simplified Example – Work & Knowledge Flows

Problem: How can such knowledge flows be identified, visualized (and supported)?

Basic Approach

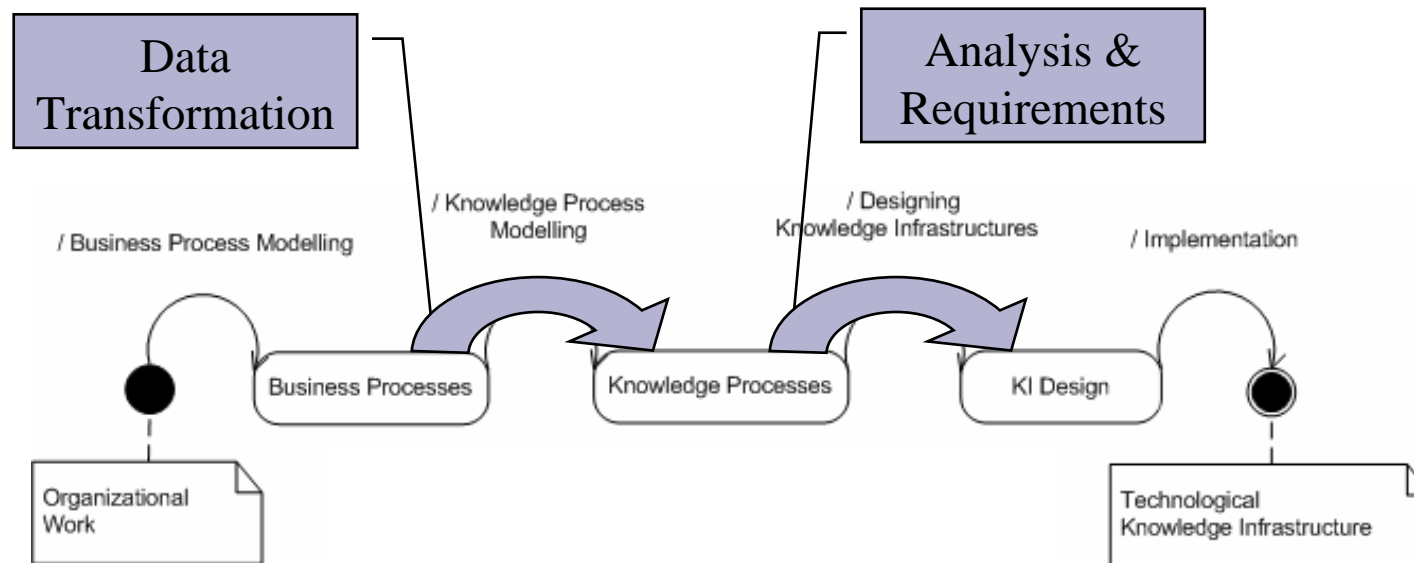

So What are Knowledge Processes?

Simple Definition: The flow of information that is relevant for action

Precise Definition: Knowledge processes describe distributed, organizational knowledge work. Thereby, knowledge processes typically include descriptions of: knowledge flows, specific knowledge activities, involved persons or roles and associated business processes regarding a certain knowledge domain [Str03b].

Knowledge Process - Knowledge About Design Decisions					Process/Role				
Knowl.-Domain	Generation	Storage	Transfer	Application	Description				
Knowledge about Design Decisions	<table border="1"> <tr> <td>SD5.2 Planning & Design</td> <td>PM</td> </tr> </table>	SD5.2 Planning & Design	PM			<table border="1"> <tr> <td>SD5.4 Implement- enatation</td> <td>TL, MD</td> </tr> </table>	SD5.4 Implement- enatation	TL, MD	Design decisions that led to specific SRD & ADD are of interest for the employees that need to implement the requirements. (suggestion by the interviewpartners: meeting minutes, e-mail archives, TWSs)
SD5.2 Planning & Design	PM								
SD5.4 Implement- enatation	TL, MD

KM Maturity Models - The KPQM Model

[Paulzen02, based on CMM, CMMI]

Maturity Stage	Description
1 - Initial	The quality of knowledge processes is not planned and changes randomly. This state can be best described as one of chaotic processes.
2 - Aware	Awareness for knowledge processes has been gained. First structures are implemented to ensure a higher process quality.
3 - Established	This stage focuses on the systematic structure and definition of knowledge processes. Processes are tailored to react to special requirements.
4 - Quantitatively Managed	To enhance the systematic process management, measures of performance are used to plan and track processes.
5 - Optimizing	The focus of this stage is on establishing structures for continuous improvement and self-optimization.

Industrial Relevance

B-KIDE and KnowFlow

- KnowFlow represents a further development of B-KIDE and
- A Strategic Professional Service of the Know-Center

Vision: KnowFlow represents a Solution for the Identification and Visualization of Knowledge Flows in Organizations based on Employee Interviews and Graph-based Analysis Reports

- Ongoing development driven by the *Know-Center* and a *spin-off company*
